

Adjunct Clinical Track

Adjunct Clinical Track faculty are usually in the private practice of medicine outside the University of Michigan; in other words, the University is not the sole employer. These appointments are at 0% to 49% effort, are for no longer than one year, are renewable, and are without tenure. Adjunct Clinical Track faculty must fulfill the 50 hours of teaching requirement per year.

Adjunct Clinical Assistant Professor: A Visiting Clinical Assistant Professor has excelled in clinical care and teaching, and these are the primary requirements for appointment or promotion to this rank.

- *Clinical work:* Clinical excellence is documented by letters, which may be from local sources and must attest to the quality of clinical service. Certification by a relevant professional board or the equivalent is a usual expectation at this rank, although this qualification may be in progress at the time of appointment according to the requirements of the relevant professional board; exceptions for some internationally trained physicians may be granted by the Medical School.
- *Teaching:* Quality of teaching is usually documented by objective teaching evaluations from the learner groups that are being taught (medical students, residents, fellows, undergraduate and graduate students as well as peer education), letters, and awards. If the candidate comes from an outside institution, letters describing the teaching efforts and quality are required.
- *Scholarship:* A Clinical Assistant Professor should show progress toward becoming scholarly engaged in their field. On the Clinical Track, invited presentations as well as publication of articles in professional journals, chapters, reviews, abstracts, textbooks, videotapes, or other educational materials are evidence of scholarly contributions and are usual features of faculty at this rank.
- *Service:* The candidate's organizational service, if present, to his or her department should be documented. For faculty members with predominantly clinical effort, several years of postgraduate clinical experience (post residency or post fellowship) combined with excellent teaching evaluations may qualify for promotion or appointment at this level, although some evidence of scholarly contribution is generally expected as noted above. New faculty members with evidence of distinct clinical expertise may also be appointed at this level.
